HOSPITALITY

EXCELLENT SOUND, OUTSTANDING QUALITY
AND EASY TO OPERATE.

Offer your guests an experience they will never forget

Whether in a lobby, wellness area or event space, in a restaurant or outdoors, our solutions are always there for your benefit.

Whether your guests are arranging an important meeting, holding a big celebration at your premises or just want to relax (or do all these things), every detail matters. This is why our audio solutions ensure that your guests feel right at home from the first moment they enter your venue.

An unforgettable experience for your guests

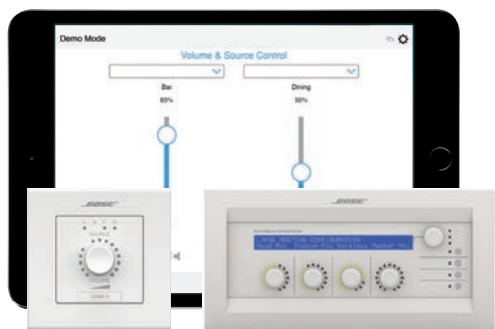

Outstanding sound quality accentuates the ambience in your premises and creates a close connection between your staff and your guests. Delivering the message of a speaker at a conference clearly and concisely to his or her audience. And it allows your bar to be transformed from a quiet place of retreat during the day to become the focal point for night-time entertainment.

Easy for your staff to operate

Your staff should be able to focus fully on the needs of guests and not waste unnecessary time on operating or fixing faults with the audio system. With intuitive operation and intelligent, automated settings tailored to your needs, our business music systems will delight not only your guests, but also your staff.

Easy to operate

BOSE CONTROLCENTER

Easy to select signal source, volume, and audibility range in the app. Or on a wall panel.

Mobile event acoustics

BOSE S1 PRO

Want to give a speech on the terrace or play a song in the bar? The ultra-compact Bose S1 Pro is set up and ready to operate in a matter of seconds. The system contains a 3-channel mixer, Bluetooth® streaming and a lithium-ion battery with an extra-long run time of up to 11 hours.

System solutions for hotels

Signal distribution & control

BOSE CONTROLSPACE

The ControlSpace processor allows you to set up as many listening zones as you wish and control them easily. The individual listening zones can be operated together, separately and in various combinations.

BOSE POWERSHARE

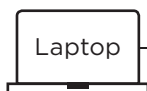

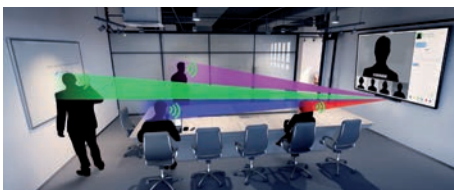

The multi-channel PowerShare amplifiers distribute the output power flexibly across the various acoustic ranges.

Local feed points for connecting external media technology.

Background acoustics

BOSE DESIGNMAX

Outstanding sound, discreet design: the Bose DesignMax systems can be used to deliver applications on any scale and to satisfy every performance requirement. DesignMax loudspeakers offer rich lows and clear highs at any volume.

The loudspeaker systems are available as in-ceiling, surface-mounted or pendant versions in black, white and with a surface that can be lacquered. A range of accessories allow them to be installed anywhere.

Conference and event acoustics

BOSE PANARAY MSA12X

In halls and large conference rooms, the elegant, discreet Bose Panaray MSA12X systems allow you to enjoy maximum intelligibility and excellent music playback along with even sound dispersion.

BOSE EDGEMAX

The EdgeMax in-ceiling loudspeakers are designed specifically to be installed in corners and along the edges of rooms. With their defined sound dispersion of 90° or 180°, they are ideal for meeting rooms with media technology or video conferencing systems.

System solutions for hotels
