# HOSPITALITY

EXCELLENT SOUND, OUTSTANDING QUALITY  
AND EASY TO OPERATE.

## Offer your guests an experience they will never forget

**Whether in a lobby, wellness area or event space, in a restaurant or outdoors, our solutions are always there for your benefit.**

Whether your guests are arranging an important meeting, holding a big celebration at your premises or just want to relax (or do all these things), every detail matters. This is why our audio solutions ensure that your guests feel right at home from the first moment they enter your venue.

### **An unforgettable experience for your guests**

Outstanding sound quality accentuates the ambiance in your premises and creates a close connection between your staff and your guests. It helps a presenter at a conference deliver a message clearly and concisely to his or her audience. And it allows your bar to be transformed from a quiet place of retreat during the day to become the focal point for night-time entertainment.

### **Easy for your staff to operate**

Your staff should be able to focus fully on the needs of guests and not waste unnecessary time on operating or fixing faults with the audio system. With intuitive operation and intelligent, automated settings tailored to your needs, our business music systems will delight not only your guests, but also your staff.

### **Easy to operate CONTROLCENTER**

Easy to select signal source, volume, and audibility range in the app. Or on a wall panel.

### **Mobile event acoustics S1 PRO+ AND L1 PRO**

Want to give a speech on the terrace or play a song in the bar? The systems have an integrated mixer, offer *Bluetooth*® streaming and are ready for use in no time. The wireless S1 Pro+ has a lithium-ion battery with an extra long running time of up to 11 hours.

The Bluetooth® word mark and logos are registered trademarks of Bluetooth SIG, Inc.

## System solutions for hotels

### Signal distribution & control

#### CONTROLSPACE

The ControlSpace processor allows you to set up as many listening zones as you wish and control them easily. The individual listening zones can be operated together, separately and in various combinations.

In/Out endpoints for connecting external media technology.

#### POWERSHAREX

The multi-channel PowerShareX amplifiers distribute the output power flexibly across the various acoustic ranges.

### Video conference

#### VIDEOBAR VB-S AND VB1

The Videobars VB1 and VB-S are all-in-one USB conferencing systems for small and medium-sized meeting rooms. Integrated directional microphones automatically control the recording area to accentuate voices in the room and shut out any other noise. 4K ultra-HD cameras with auto framing function provide razor-sharp images.

### Background acoustics

#### DESIGNMAX

Outstanding sound, discreet design: the DesignMax systems can be used to deliver applications on any scale and to satisfy every performance requirement. DesignMax loudspeakers offer rich lows and clear highs at any volume.

The loudspeaker systems are available as in-ceiling, surface-mounted or pendant versions in black, white and with a surface that can be painted. A range of accessories allow them to be installed anywhere.

#### FREESPACE 360P

The loudspeaker system with 360° coverage for garden and outdoor areas.

### Conference and event acoustics

#### MSA12X

In halls and large conference rooms, the elegant, discreet MSA12X systems allow you to enjoy maximum intelligibility and excellent music playback along with even sound dispersion.

#### EDGEMAX

These in-ceiling loudspeakers are designed specifically to be installed in corners and along the edges of rooms. With their defined sound dispersion of 90° or 180°, EdgeMax systems are ideal for meeting rooms with media technology or video conferencing systems.

EdgeMax - award-winning technology now also available with an installation depth of just 10 cm.
