

BOSE

PROFESSIONAL

One system—endless possibilities.

Bose Professional AMU Series

The newly expanded AMU multi-use loudspeaker series is your mix-and-match solution for both large distributed and small- to mid-sized audio systems in indoor and outdoor settings. A range of driver configurations, coverage patterns, mounting options, and orientations offers endless versatility for your installation needs.

AMU Series loudspeakers combine total versatility with the high-output sound, exceptional vocal clarity, and rich musical depth that you've come to expect from Bose Professional.

Hear. There. Everywhere.

AMU Series loudspeakers are designed to look great while blending into spaces like bars, restaurants, and fitness centers, thanks to a surprisingly compact design and black/white color options. Compatible mounting accessories expand the installation possibilities, including wall and overhead suspension. Plus, the innovative pole adapter offers unique go-anywhere portability for temporary audio setups.

The integrated 70/100V transformer includes a bypass switch for live sound reinforcement. Systems can be enhanced with the MB210-WR dual 10-inch weatherized subwoofer, and PowerShareX amplifiers include factory-optimized presets for peak performance and simplified installation.

Designed to maximize both flexibility and performance, the AMU Series provides exceptional vocal clarity and musical depth while maintaining a sleek, unobtrusive presence in any venue.

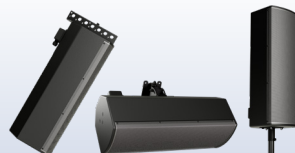

Rotatable horn

Constant-directivity high-frequency horn can be rotated for vertical or horizontal positioning to provide wide, even coverage.

Two-way transducer setup

AMU loudspeakers feature a high-excursion woofer and high-frequency compression driver, enhanced by a passive crossover with optimized filters.

New accessories expand your possibilities.

Optional accessories include the surface-mount pan-and-tilt bracket, single-point suspension bracket with multi-angle attachment points, and external pole adapter for portable use.

Already weatherized, right out of the box

Engineered to withstand the elements but priced like indoor loudspeakers, every AMU model includes an IP55 rating right out of the box—no custom orders or surcharges for weatherization.
